

Solutions for off line robots' programming

- A graphic programming according to a 3D virtual stage and skilled technological conditions.
- A simulation for an optimum creation
- A safe and successful programming system.
- A solution for several automated technologies:
Arc welding, water jet cutting, cutter cutting, polishing, deburring, laser welding, manufacturing...
- The calibration service of the robotic unit automatically realised in the best conditions.

**Increase in productivity and flexibility of your automated installations.
Programming and manufacturing costs optimisation.**
